

## **Environmental Policy**

DRE Electrical Services Ltd recognises and respects the natural and built environments in which it operates, and is committed to fulfilling its social and environmental responsibilities.

Together with our customers, we seek to maximise the positive impacts of infrastructure and developments in which we are involved and to minimise any negative impacts from our operations. We regard good environmental practice as a fundamental element of our business and strive for continuous improvement in our environmental performance.

Our approach to environmental management is structured and risk based. At all stages of our business processes, we aim to identify and access risks, adopt good practice and ensure that sound systems of work are in place.

We seek to inform, train and involve all workers to enhance environmental awareness and encourage positive environmental practice at all times.

We aim to use scarce natural resources wisely, to reduce waste and to recycle where possible, to conduct our activities in a considerate manner, consulting with those affected by our work and to cause no adverse environmental incidents or pollution.

We will consult and work collaboratively with all our customers, communities, partners, designers, suppliers and sub-contractors to achieve this.
